QualityPlus - making quality the way you do business.

QualityPlus automates the ineffective and costly “hand” collating and spreadsheet calculations for calculating AQLs and Defect levels. It makes sure the right checks are done at the right time without having to teach advanced statistics to operators in an effort to help them make better decisions. CAPA plans are easily managed through the system from issue origination, root cause analysis, planning and verification.

Batch history records are maintained for quality assurance, be it ISO certification or compliance standards for your customers.
Finbar Gallagher is a “Big Data” pioneer with over 25 years experience in manufacturing, analysis, improvement and large scale information systems development. Finbar’s innovative technology leadership has helped companies such as Hewlett Packard, Bausch & Lomb, Oral B, Yves Rocher, Peach State Market and Glover Printing gain a competitive edge and increase ROI through business process automation and integration. Finbar led several systems implementation teams during his 12-year tenure with Hewlett Packard, most notably the engineering team that successfully introduced the first Hewlett Packard Inkjet cartridge manufacturing line to Ireland. Finbar holds a Masters in Systems Engineering from Boston University.

QualityPlus:

- Certify compliance to AQLs at every inspection
- Present documented Corrective Action
- Objective assurance of in-process AQL compliance
- Quality Assurance tasks can be performed at the operator level decreasing cost and increasing flexibility
- Data is accessible from anywhere
- End-to-end solution in any environment
- Collects, calculates statistics, identifies context, sets test limits, presents in-real-time, presents aggregates and reports by lot

QualityPlus is the only CAPA application that integrates into your enterprise wide operations management system, in effect, making quality the way you do business and not just another program.
